## PROFESSIONAL SUMMARY

---

AI Engineer and Machine Learning specialist with 3+ years of experience designing and implementing enterprise-scale AI solutions using AWS cloud infrastructure. Proven track record of building production ML applications that improve business efficiency and user satisfaction. Skilled in NLP, computer vision, and foundation models, with demonstrated leadership managing technical teams and driving community engagement. Combines technical expertise with teaching background to effectively communicate complex AI concepts and deliver measurable results across diverse domains.

## TECHNICAL SKILLS

---

- **Machine Learning & AI:** TensorFlow, PyTorch, Keras, Scikit-learn, BERT, Transformers, NLP, Computer Vision, Predictive Analytics, Foundation Models, Transfer Learning, Fine-tuning
- **Cloud & Infrastructure:** AWS (SageMaker, Bedrock, Lambda, ECS, EC2, S3, Lex, Comprehend, CloudWatch), Docker, Kubernetes, CI/CD pipelines, Terraform
- **Data Engineering & Analysis:** Python, SQL, Pandas, NumPy, PySpark, ETL/ELT, Data Validation, PostgreSQL, DynamoDB, Elasticsearch
- **Development & Monitoring:** Git, GitHub Actions, MLFlow, Prefect, Prometheus, Grafana, Matplotlib, Seaborn, Power BI

## PROFESSIONAL EXPERIENCE

---

**Istidama Consulting** | Amman, Jordan (Hybrid) Lead Instructor | March 2026 – Present

- Lead an intensive AI and Data Science bootcamp, delivering a comprehensive curriculum covering the end-to-end machine learning lifecycle, from data engineering to production deployment.
- Instruct on advanced NLP and LLM architectures, including Transformer fine-tuning (BERT, RoBERTa, GPT), RAG pipeline integration with vector databases (Weaviate), and dense vs. sparse retrieval methods.
- Facilitate technical modules on data architecture and engineering, teaching SQL analytics (CTEs, Window Functions), Python-based ETL processes, and database management with PostgreSQL and Fuseki triple stores.
- Guide students through MLOps and software engineering best practices, including Docker containerization, FastAPI backend development, Git branching workflows, and automated evaluation monitoring (latency and error rates).
- Mentor cross-functional student teams on project framing, KPI definition, and the deployment of full-stack AI applications integrated with Next.js frontends.

## **YGA Upskilling Program** | Amman, Jordan (Remote/Hybrid)

*Business English Instructor* | October 2025 - March 2026

- Designed a specialized ESP (English for Specific Purposes) curriculum tailored for QA testers and Generative AI students, focusing on technical documentation and agile communication.
- Facilitated high-impact workshops on professional workplace readiness, including bug reporting, prompt engineering articulation, and stakeholder presentations.
- Bridged the gap between technical proficiency and workplace integration by coaching students on cross-functional collaboration and professional etiquette in tech environments.

## **HubinIT** | Remote

*AI Engineer & Team Lead* | July 2024 - May 2025

- Architected a multi-layered AI Employee platform using AWS Fargate, Bedrock, and Comprehend, integrating modules for ethics & compliance, customer service, financial analysis, legal documentation, and sales.
- Built AI Ethics & Compliance Platform with regulatory intelligence capabilities, ensuring adherence to global jurisdictions while maintaining secure AI operations.
- Implemented knowledge retrieval systems using Kendra, OpenSearch, and DynamoDB for context-aware responses across financial forecasting, legal analysis, and customer support domains.
- Designed serverless microservices on AWS Fargate with containerized components, implementing secure data encryption and IAM role-based access controls.
- Integrated AI capabilities including Textract document processing, Comprehend sentiment analysis, and SageMaker forecasting to enable complex business workflow automation.
- Used Amazon ECS for container orchestration and ECR for image registry, creating scalable deployments with automated health monitoring and dynamic capacity adjustment.
- Led development across platform modules, establishing integration points, configuration standards, and documentation that improved system reliability and maintainability.

## **Amideast Jordan** | Amman, Jordan

*English Instructor* | October 2024 - Present

- Crafted specialized business English curriculum focused on technical communication for professionals in the tech industry.
- Implemented data-driven assessment methodologies, tracking student progress through quantifiable metrics.
- Developed customized learning materials through cross-functional collaboration with subject matter experts.

## **Omdena** | Remote

*Machine Learning Engineer* | February 2022 - April 2024

- Engineered emotion detection system for conversational AI using transformer architecture, resulting in 20% increase in user satisfaction scores.
- Led cross-functional teams to streamline AI solution delivery processes, reducing development timelines by 25%.

- Enhanced fake news detection accuracy by 15% through implementation of BERT-based models with XGBoost ensembling.
- Executed end-to-end ML project development from data collection to deployment for 5+ real-world applications.

*Technical Writer & Community Manager* | July 2023 - April 2024

- Generated comprehensive technical documentation for AI/ML platforms, increasing developer adoption by 20%.
- Drove 30% growth in community engagement through strategic content initiatives and technical workshops.
- Analyzed community metrics to identify growth opportunities, implementing programs that improved member retention by 15%.

**Al Hussein Technical University** | Amman, Jordan

*English Lecturer* | February 2018 - May 2024

- Designed technology-enhanced language learning curriculum for university-level courses, incorporating data analytics to track student language acquisition progress.
- Developed assessment frameworks using statistical methods to objectively measure ESL student performance, enabling personalized learning paths and targeted interventions.
- Led faculty initiatives reaching 20+ educators to implement innovative language teaching methodologies, increasing student engagement and improving learning outcomes.
- Created interactive digital learning materials that integrated technical vocabulary relevant to students' academic disciplines, bridging language learning with professional development.

## LEADERSHIP EXPERIENCE

---

**HubinIT** | Remote

*Intern Team Lead* | July 2024 - Present

- Directed team of 7 AI engineering interns in developing enterprise-scale AI solutions from concept to deployment.
- Coordinated cross-functional projects involving AWS cloud integration and MLOps implementation.
- Established code review processes and technical documentation standards, improving development velocity by 20%.
- Organized weekly technical knowledge sharing sessions reaching 15+ team members across departments.

**Omdena** | Remote

*Jordan Chapter Lead* | September 2022 - April 2024

- Led community building initiatives and technical workshops for 100+ AI practitioners in the Middle East region.
- Managed 7+ AI/ML projects from conception to production deployment with cross-functional teams.
- Mentored 7+ junior developers on ML engineering and cloud infrastructure best practices.

## PROJECTS

---

### **Enterprise AI Assistant** | HubinIT

*AI Virtual Employee Platform*

- Designed multi-intent conversational system with AWS Lex handling 5 core business workflows (financial forecasting, legal compliance, sales analytics, customer service, and ethics monitoring).
- Developed secure document processing architecture for legal and financial documents using AWS Textract and Comprehend, with entity extraction, compliance assessment, and encryption capabilities.
- Integrated foundation models via AWS Bedrock for specialized analysis (legal reasoning, ethics assessment, financial projections), with domain-specific knowledge retrieval enhancing response accuracy.

### **AI/ML Solution Portfolio** | Omdena

*Production Machine Learning Applications*

- **LATAM Fake News Detector:** Built political disinformation detection system achieving 87% accuracy using BERT and XGBoost.
- **Medical Imaging Analysis:** Developed CNN-based cancer detection system reaching 92% accuracy and reducing diagnosis time by 30%.
- **Therapeutic Conversation Agent:** Created mental health chatbot with 85% emotion detection accuracy and multilingual support.
- **Emotion Recognition System:** Designed human-robot interaction framework improving empathy metrics by 20%.
- **Cardiac Prediction System:** Built edge-optimized platform for wearables reaching 90% prediction accuracy while reducing false positives by 15%.

## EDUCATION

---

### **International University of Applied Sciences** | Bad Honnef, Germany

*BSc Applied Artificial Intelligence* | Expected December 2026

### **Islamic University of Minnesota** | Bloomington, Minnesota

*MSc Computer Science* | May 2022

### **Islamic University of Minnesota** | Bloomington, Minnesota

*BA Islamic Studies* | August 2017
